

DISCRETE PRODUCT LAUNCH

Handheld and Backpack Sprayers

Our powerful concrete cleaner, Discrete, will not dry as quickly as other chemicals on a hot surface because it has a wetting agent incorporated. **While this is a huge benefit**, we found Discrete did not play nicely with an average handheld or backpack sprayer with normal rubber O-rings and seals. As you can imagine it makes the seals very slippery and causes dripping and leaking.

Introducing - The A-Team.

After doing extensive research we found three heavy-duty spraying units that pair beautifully with Discrete that have **Viton Seals**. Viton Seals work perfectly with Discrete's wetting agent and there is no dripping or leaking.

Introducing our **IK 1L, 6L and 12L Handheld and Backpack Sprayers**. These spraying units have maximum strength and versatility with even the most aggressive chemicals.

"These IK special sprayers are amongst the toughest on the market and can be used safely in a wide variety of situations and conditions."

Testing: Hanson's Concrete Truck

If you have ever tried to remove concrete splatter from a botched job you will know it's no easy task.

But Discrete says Hold my Beer.

Based on organic, natural sources, Discrete is environmentally friendly and safe to use.

Discrete has no Acidic value yet works the same on the concrete build up as Hydrochloric acid.

How does that relate to your awesome new IK 1L, 6L and 12L Heavy-Duty Viton Seal Spraying Units?

I'm glad you asked.

Discrete does all the hard work getting rid of your concrete splatters spills and build up. But it has to be diluted, applied, scrubbed and washed off.

The last thing you want to deal with is dripping and leakages from your spraying units and having to clean them up as well! Our IK 1L, 6L and 12L Spraying units are built for comfort, messy jobs, ease of use and most importantly Discrete!

Why work hard when you can work smart?

Hanson's care about the appearance of their concrete trucks. They were very impressed with how **quickly** we got the job done using the new spraying units and just how **effective** Discrete was to their well-used machine.

You can see from the picture on the right where Discrete was applied and where it had dripped down the machine after being washed off.

Mic drop.

Testing: MCA Mining Vehicle

“Mining Grime” is basically a natural mineral-based substance that builds up on mining vehicles. It cokes itself onto vehicles & equipment and is not easily removed by just a lot of scrubbing and detergent. It's like the build-up on your shower screen, multiplied by 100. Yuck...

Like Hanson's, **MCA take pride in the appearance of their mining vehicles.** Mining vehicles receive quite a hammering in their environment and its not uncommon for rust to build up from the hard water used on mine sites or stickers to peel. MCA were concerned that Discrete would make these problems worse but we reassured them that **as long as the Discrete is applied and washed correctly** it would cause no further problems. In the photo on the bottom right you can see easily what side Discrete was used on the Bullbar #proudparent.

We found filling up the iK Spraying Units very simple with the large openings, it meant **no spillages** which is something we suffered in the past. The level indicator was very handy for working out how much water to use with diluting. The 12L Backpack unit was **very comfortable** to wear and dummy proof to use. It got the whole MCA vehicle done easily in one go. The 6L was the fan favourite for being the perfect size to carry and **precise spraying nozzle.** The 1L is the perfect thing for small jobs. we found it so easy to use and paired perfectly with our 750ml Discrete bottle.

1L IK™ Discrete Hand-Held Sprayer

The 1L IK is the perfect Baby Bear partner for Discrete. It has been designed for small cleaning jobs and light duties but has maximum strength and versatility with even the most aggressive chemicals.

- Made of special, high resistance materials for use with various chemicals.
- Designed for smaller jobs only weighing at 1kg.
- The hand pump is effortless to use and can be locked into place.
- Viton seals for excellent Discrete resistance and durability.
- See liquid level at a glance with tank graduations.
- The pressure safety valve ensures the sprayer is protected from over pressurisation.
